Abstract
The manuscript should contain an abstract. The abstract should be self-contained and citation-free and should be a maximum of 400 words. The abstract should state the purpose, approach, results, and conclusions of the work. The author should assume that the reader has some knowledge of the subject, but has not read the paper. Thus, the abstract should be intelligible and complete in itself (no numerical references); it should not cite figures, tables, or sections of the paper. The abstract should be written in the third person, not the first person. The manuscript should contain an abstract. The abstract should be self-contained and citation-free and should be a maximum of 400 words. The abstract should state the purpose, approach, results, and conclusions of the work. The author should assume that the reader has some knowledge of the subject, but has not read the paper. Thus, the abstract should be intelligible and complete in itself (no numerical references); it should not cite figures, tables, or sections of the paper. The abstract should be written in the third person, not the first.

Keywords: First keyword, Second keyword (Please, alphabetical order and at least one keyword)

1. Section Title

This template contains detailed instructions for preparing manuscripts for the SAUCIS journal. Failure to follow them may result in rejection of the manuscript without further processing. So, read both the source and the compiled texts.

Insert your text here. Ensure that it is written in correct English. The guides [1,2], [3–5] can help it.

If there are subsections, then you may use

1.1. Title of the subsection

You may also use subsubsections, but please put a line or two of text between the subsections and the subsubsection titles.

Please do not place a proclamation immediately after a subtitle at any level.

Write a line or two of text in between.

Proof. Your proof. Please do not use the quantifiers $\forall, \exists$ as abbreviations, i.e., use them only in papers of formal logic. The symbol for the end of the proof will appear automatically. □

For displayed equations (formulas), you may use

$$e^{i\pi} = -1 \tag{1}$$

Cite as: A. Yıldız, and F. Bozkurt, "Title", *Sakarya University Journal of Computer and Information Sciences* 9 (1) 2026, XXX-XXX. doi: 10.35377/saucis...XXXXXXX

and/or similar LaTeX constructions (align(ed), multiline, gather(ed)).

$$\ell_\infty(\Omega) = \left\{x = (x_k) \in \omega : \Omega x \in \ell_\infty\right\}$$
$$c(\Omega) = \{x = (x_k) \in \omega : \Omega x \in c\}$$
$$c_0(\Omega) = \{x = (x_k) \in \omega : \Omega x \in c_0\}$$

That way, you may refer to (1) in the subsequent text. We strongly encourage the use of this dynamic system of referencing instead of explicitly writing, for example, (1).

If you do not refer to an equation, then you may write it as

$$e^{i\pi} = -1 \tag{2}$$

In such a starred version, the equation will not be numbered. If you want to use a distinctive tag for an equation, You may do that in the following manner:

$$e^{i\pi} = -1 \tag{3}$$

So you can refer to (3).

Formulas should be displayed *only* If they must be numbered for a subsequent reference or if they are too long or complicated. Please *do not* number displayed formulas that are not referred to. Send figures/illustrations as eps files (each figure/illustration in a separate file). They can be inserted in the following way:

Table 1. table caption

x	$M=4,k=0$	$M=4,k=1$	$M=1,k=1$	$M=8,k=0$	$\lvert y-y_{101}\rvert$
0	2.37 e-8	4.63339 e-10	2.61472 e-11	6.32711 e-15	0.0000255
0.3	4.497 e-9	1.04070 e-10	5.93744 e-12	6.38417 e-15	4.53581E−6
0.2	3.8574 e-11	3.13685 e-12	2.31892 e-13	5.12340 e-16	1.32679E−7
0.2	6.5129 e-12	1.90014 e-12	1.48048 e-14	4.40110 e-17	9.91385E−8

Figure 1. Sakarya University

The code (autoref) Table 1 and Figure 1 must be used in Tables and Figures.

2. Algorithms, Codes, and Pseudocodes

Algorithms, codes, and pseudocodes should be given in a table structure centered on the page as shown in Algorithm 2.

Besides the standard handbooks on LaTeX [6–8], Please consult the short and useful guide [9].

3. Conclusion

In this section, you should present the conclusion of the paper. Conclusions must focus on the novelty and exceptional results you acquired. Allow a sufficient space in the article for conclusions. Do not repeat the contents of the Introduction or the Abstract. Focus on the essential things of your article.

Article Information

Author's Contributions: The article is a single author. In single-author articles, the author's declaration that he/she prepared the article alone will be included; in multi-author articles, the contribution rates of all authors will be provided separately.

Acknowledgments: Acknowledgments (people, grants, funds, etc.) should be given in this section. This work was supported by X University Scientific Research Projects Unit under Grants 0000-00-00-001, 0000-00-00-002.

Conflict of Interest: The authors declare that there is no conflict of interest regarding the publication of this paper.

Support Section: In this section, if the research is supported by an institution or organization, information such as the institution or organization's name and the project number will be included. If there is no support, this part does not need to be written.

Ethical Approval: In this section, the author(s) declaration regarding research and publication ethics will be included. This title must be included for all articles. The name, date and number of the Ethics Committee can be given in this section. It is declared that during the preparation of this study, scientific and ethical principles were followed, and all studies used are listed in the bibliography.
